Red squirrel mate found for lonely Norfolk male

Staff hope the female will mate successfully with their beloved male squirrel

Hopes are high that a lonely red squirrel in Norfolk will find love after a potential mate was found in Cornwall for the long-term bachelor.

Kelling Heath Holiday Park, near Holt, has kept red squirrels since 1989 as part of a national conservation scheme has bred 20 kittens.

However, a shortage of females meant it took about a year to find a mate for their beloved 18-month-old male.

If the pair get on, staff hope they will breed in the spring.

"Fingers crossed"

The release of the non-native greys in the 19th Century is the main reason for the sharp decline in the number of red squirrels in the UK.

The grey is larger, more aggressive and better adapted to broad-leaved woodland; it is also a carrier of the squirrel pox virus, which is deadly to the reds.

The Norfolk holiday park is now part of a breeding programme run by the East Anglian Red Squirrel Society.

The six-month-old female was part of a "swap deal" with Paradise Park in Cornwall, which specialises in breeding endangered wildlife.

In return for the potential mate, a male squirrel was taken to Cornwall.

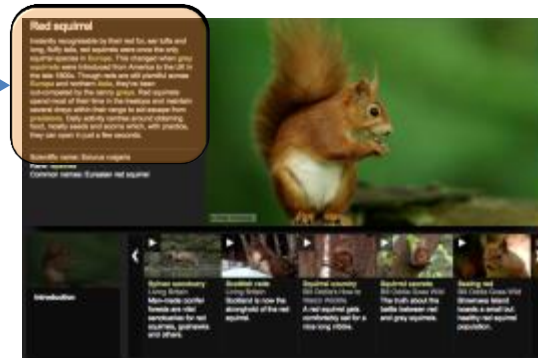

David Martin, countryside manager at Kelling Heath, said: "We're very lucky to have found a

Cornwall to welcome red squirrels

Red squirrel

- The red squirrel (*Sciurus vulgaris*) was once the only squirrel in Europe until American grey squirrels were introduced in the 1800s
- They are solitary animals, and usually only come together to mate
- Red squirrels build nests called dreys which they may share with related squirrels to keep warm during winter
- Females usually have litters of 2-3 kittens, but only between 20 and 50% of young survive into adulthood

Energy Profile Germany

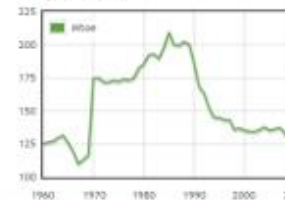

Germany, officially the Federal Republic of Germany, is a federal parliamentary republic in Europe. The country consists of sixteen states while the capital and largest city is Berlin. It covers an area of 357,021 km² and has a largely temperate seasonal climate. With 81.8 million inhabitants, it is the most populous member state and the largest economy in the European Union. It is one of the major political powers of the European continent and a technological leader in many fields. A region named Germania, inhabited by several Germanic peoples, was documented before AD 100. During the Migration Age, the Germanic tribes expanded southward, and established successor kingdoms throughout much of Europe. Beginning in the 10th century, German territories formed a central part of the Holy Roman Empire of the German Nation. During the 16th century, northern German regions became the centre of the Protestant Reformation while southern and western parts remained dominated by Roman Catholic denominations, with the two factions clashing in the Thirty Years' War. Occupied during the Napoleonic ... [read more](#)
